Eldermark's COVID Tracker

An essential NEW tool for these challenging times.

Put away those 3-ring binders and those Excel worksheets and move your COVID-19 management documentation to Eldermark's COVID Tracker – a new feature incorporated into our Electronic Health Record technology that provides a historical timeline of your response to each resident's COVID management status.

We make it easy to track and maintain your documented efforts in resident screening, testing, and overall COVID-19 management practices in Eldermark's COVID Tracker. Enter data directly into the resident health record and run real-time data reports, all from one central place.

Eldermark offers the COVID Tracker as an included software feature without additional cost to the user. This is consistent with our "partnership culture" that serves and supports our senior living customers.

Contact us today to discover how Eldermark's COVID Tracker can provide you with this essential tool for your COVID-19 management strategy.

- Provides caregivers with a central, easy-to-access location for all COVID-management activities and resident status updates
- Supports and informs your emergency management and preparedness plans for infectious disease management
- Informs your staffing-for-resident-acuity models
- Creates a record for regulatory reporting requirements and for defending liability claims
- Supports your infection control practices and policies, and demonstrates your compliance efforts
